

Enable Direct Generation of Electronic Documents with Datalogics PDF Output Module (PDF OM)

Direct Output to PDF

Datalogics PDF Output Module (PDF OM) is available for the DL Pager™ and DL Composer™ composition systems. The PDF OM enables direct generation of electronic documents in Portable Document Format (PDF), the native language of the Adobe® Acrobat® family of products.

PDF provides a means of cross-platform distribution (PC, Macintosh, UNIX) of electronic documents. These can be distributed on the World Wide Web, CD-ROM, or any other medium that allows for transfer of digital information.

Adobe Technology

Datalogics PDF OM provides Acrobat compatible PDF output without the intermediate step of creating PostScript because it is based on the Adobe® PDF Library™, which Datalogics licenses for Adobe Systems Incorporated. Using the Adobe PDF Library to create PDF documents guarantees Acrobat compatibility and provides access to all the rich functionality of Adobe PDF.

Automatically Create Feature Rich Documents

The PDF OM supports formatting commands with Datalogics composition tools that embed PDF document navigation features such as outlines, text annotations, hyperlinks and World Wide Web links during the composition process. The PDF Output Module directly generates PDF files from batch or interactive composition jobs.

A Forward Compatible Solution

Whether you are creating PDF files for a print workflow or for delivery over the Internet, Datalogics PDF OM provides the functionality you need for delivering rich, highly compressed documents, with complete page fidelity. As your electronic delivery needs evolve, the Datalogics PDF OM will evolve with you because the Adobe PDF Library technology assures compatibility with future releases of the Adobe Acrobat products.

For More Information

PDF is the delivery format of choice when page fidelity is required. To find out how PDF can improve your publishing solution, contact Datalogics Sales at 312.853.8200 or via e-mail at sales@datalogics.com.

PDF OM ADVANTAGES

- Automatically creates PDF files
- Supports font embedding
- Supports graphics merge for TIF, GIF, JPEG/JPG, PNG and PDF graphics
- Creates bookmarks and links during composition
- Support for creation of Acrobat compliant documents
- Compression, linearization, optimization and encryption
