

Datalogics Meets the Needs of Financial Printers with DL Pager™ and the SEC HTML Export Writer

SEC Submissions

DL Pager has established itself as the industry standard engine for automated SEC EDGAR (Electronic Data Gathering Analysis and Retrieval) submission with the EDGAR Output Module. In the Spring of 1999 the Securities Exchange Commission began accepting electronic submissions in a modified HTML format. Datalogics has developed an HTML export capability for DL Pager to meet the needs of financial printers who submit electronically to the SEC.

SEC HTML

The SEC HTML Export Writer is based upon a subset of the tag set defined in the W3C (World Wide Web Consortium) recommendation for version 3.2 of the HTML data encoding standard. This SEC specific HTML will support single file submissions without graphic inclusions or external links. This new format is intended to replace the current ASCII EDGAR format, which must be filed with the SEC. Submitters will be allowed to file a PDF courtesy copy of their HTML submissions under the new SEC guidelines.

SEC HTML Features

DL Pager and the SEC HTML Export Writer will support concurrent output to SEC HTML and PDF or PostScript from the same input data stream. DL Pagers support for complex financial tables and intricate layout control will provide the means to automatically generate submissions without designing individually tagged HTML documents. The SEC HTML Export Writer will support:

PLATFORM SUPPORT

The SEC HTML Export Writer is available on the following platforms:

- Windows NT/2003
- DEC VAX/VMS
- DEC Alpha/VMS

AVAILABLE OUTPUT FORMATS

- Adobe PDF
- Adobe PDF PostScript
- SEC EDGAR
- SEC HTML (EDGAR II)
- IBM AFP (Advanced Function Printing)
- Xerox Metacode
- Internet HTML

- Financial tables
- Stacked heads and ruling
- SEC compliant change marking
- SEC compliant graphics substitution
- Column spanning
- Row and column shading
- Paragraph quadding and page ruling
- Paragraph skews
- User defined fonts and styles
- Internal hypertext link support for cross references
- Automatic generation of hypertext footnotes
- Efficient use of processor time with dual output from existing DL Pager formats
- Viewing with industry standard Web browsers which support the HTML v3.2 tag set

For More Information

For more information about how SEC HTML Export Writer and DL Pager can work in your composition environment, contact Datalogics Sales at 312.853.8200 or via e-mail at sales@datalogics.com.
