UPDATE INFORMATION

MAJOR MODIFICATIONS IN PDFL SDK 8

- Replaced print functionality using AGM Print library
- Added new versions of the non-page item APIs: they take an ASText parameter instead of a char*
- Support for Unicode file systems has been added. Unicode file system can be used by creating a file system instance using ASFileGetFileSysByName(ASAtomFromString("DOS")) or ASGetDefaultUnicodeFileSys()
- The correct Annotation/Action type will change when EnumDocURL() is called, if the link is changed
- Provided optimizations for PDFEdit, Form XObjects, Path, and Scratch Doc Usage reduction
- Added unconditional flate compression of streams representing ICC-based color space
- Enabled duplex printing for printing to printer on Windows
- Enabled HFT support for SDK clients
- Removed ASRaiseAware mechanism (which used setjump and longjump) in favor of C++ exceptions on MAC and Unix

CHANGED PRINT FUNCTIONALITY

- While printing to a printer, the endPage parameter indicates the last page that should get printed (using zero-based numbering). For example, startPage = 0 and endPage = 2 will print first three available pages
- emitShowPage is not honored anymore. It is always true.
- emitDSC is not honored anymore. It is always true.
- emitPSXObjects is not honored anymore. It is always false. This is as per a note in the PDF Reference manual that states “*Since PDF 1.4 encompasses all of the Adobe imaging model features of the PostScript language, there is no longer any reason to use PostScript XObjects. This feature is likely to be removed from PDF in a future version*”.
- brokenCRDs is not honored anymore. It is always false.
- incProcsets is not honored anymore. It is always false.
- Default value for useSubFileDecode is false. The SubFileDecode filter will always be emitted when you print in binary format.
- emitColorSeeps will be honored only when printing to a printer.
- Setting transparencyQuality = 0 will mean PDF File with vector data will be rasterized. Set it to “80”, for non rasterized output as in PDFL SDK 7.0.
- Setting saveVM to true would mean, PostScript font program will be emitted on a per-glyph basis.

- The following callbacks are not supported in PDDocPrintPages():
 - CanEmitFont()
 - DataSourceString()
 - EmitPrologResource()
 - DocBegin()
 - EmitPageContents()
 - EmitPrologString()
 - EmitPSFontBegin()
 - GetFontVMUsage()
 - UndefineFont()

Note: Use of PDDocPrintPages() should be avoided; instead, the higher-level PDFLPrintDoc() method should be used.

CHANGED FUNCTIONALITY FOR HFT – TARGET

Calls to methods AVExtensionMgrRegisterNotification() and AVExtensionMgrUnRegisterNotification() should be changed to PDFLibraryRegisterNotification() and PDFLibraryUnRegisterNotification() respectively.

KNOWN ISSUES

The following is a list of open issues in PDF Library SDK 8:

- Print Workflow:
 - On Windows, in order to print all pages to a PS file, startPage needs to be set to 0 and endPage to -1. Ranges should be set to NULL as well
 - On Macintosh, while printing to a printer, printing will stop on endPage. For example if startPage = 0 and endPage = 2 then only the first two pages will be printed
 - PDFLPrintDoc() honors only default values for the following parameters:
 - tilingMode (kPDNoTiling)
 - boundingBox [0 0 0 0]
 - Oblique text in CID Type1 fonts prints as regular text in Post Script printing
- Unicode-encoded Cyrillic character strings with Type 1 fonts may fail to be embedded

GETTING STARTED

Install the PDF Library SDK as described below in the "Installation" section. The PDF Library 8 is supported for the platforms, operating systems and compilers listed in the table below:

Platform	Operating System	Compiler
Macintosh PowerPC and Intel-based Macintosh	Mac OS X 10.4.6	XCode 2.3
Windows 32-bit	Windows XP	Microsoft Visual Studio .NET 2005
SunOS 32-bit	Solaris 8, 9	gcc 3.2
IBM AIX	AIX 5.1, 5.2	Visual Age (x1C) 6.0
Linux	Red Hat WS 4	gcc 4.1.0

Important Note: While it may be possible to use the library in other development environments, such use is not supported by Adobe. We have tested the PDF Library only with the compiler versions listed in the table above.

INSTALLATION

ALL PLATFORMS:

The following is the directory structure for all platforms:

/PDFLSDK8

 /Docs

 /Include

 /Headers

 /Include

 /Source

 /Libs

 /Platform

 /Resource

MACINTOSH PLATFORM:

1. Libs are in PDFLSDK8:Libs:Mac:AdobeXXX.framework folder. Aliases or proper paths must be set to ensure that your applications run properly. These are universal libraries: the same set of libraries will work on both the Mac PPC and Intel-based Macintosh platforms.
2. Include PDFLInitCommon.c from /Source folder to your client project. All 'C' source files must be compiled as C++ files by using following steps:
 - a. Select the file/files in question in the project source pane and 'get info' on those files.
 - b. In the 'general' panel, change the 'File Type:' popup from sourcecode.c.c to sourcecode.cpp.cpp

This change is required as we have removed ASRaiseAware mechanism on MAC and UNIX.

WINDOWS PLATFORM:

1. For the standard version of the PDF Library SDK, use the installer titled WinPDFL8SDKminSize.exe. For the speed optimized version of the PDF Library SDK, use the installer titled WinPDFL8SDKmaxSpeed.exe. It is important to note that **only one version of the PDFL SDK Library should be installed at a time.** Before installing another version of the PDFL SDK Library, the previous version of the library should be uninstalled using the Windows Add/Remove mechanism.
2. For successful execution of applications outside of the Microsoft Visual Studio C++ .NET IDE, you can either copy the libraries supplied in the Libs folder to the folder where your executable resides, or place the path for the libraries into the environment variable "path". This way the executables will always find the dynamic linked libraries at run time. Also, you must have the VC8 runtime dynamic linked libraries in your machine. This can be done by **executing vcredist_x86.exe** (distributed as part of VC8).

UNIX PLATFORM:

1. Copy the SDK file and execute the following in the directory you wish to unpack the SDK: `zcat sparcsolpdf18sdk.tar.gz | tar xf -` (or `linuxpdf18sdk.tar.gz` or `aixpdf18sdk.tar.gz`)
2. Modify appropriate .mak file to point to your installed gcc directory and static library directory.
3. You will need to set the environment variable LD_LIBRARY_PATH to point to Libs/sparcsol (or linux). On AIX, the environment variable LIBPATH should be used.
4. Include PDFLInitCommon.c from /Source folder to your client project. All 'C' source files must be compiled as C++ files by using following options:
 - a. AIX x1C: `++`
 - b. Solaris and Linux gcc: `-x c++`
