PRESS RELEASE

Datalogics releases .NET interface for the Adobe® PDF Library™

Chicago, IL, October 2, 2007 — Datalogics, a leading provider of PDF technologies and key channel for Adobe PDF toolkits, today announced the immediate availability of a .NET interface for the Adobe PDF Library. This interface will enable application developers to more effectively integrate Adobe's powerful PDF Library API into their .NET environments, giving them access to a broad range of robust functionality, while taking advantage of the efficiencies and software development features available from the Microsoft® .NET Framework.

“We’ve seen strong interest in .NET with notable growth over the past year or so,” remarked Kevin McNeill, VP Operations. “Prior to this release, .NET developers were left with a difficult choice: write their own custom wrapper around the Adobe PDF Library - a nontrivial task - or select a third-party PDF technology that happened to have some sort of .NET support. Providing this .NET interface as part of our distribution of the Adobe PDF Library allows software application vendors to focus on their core competencies while relying on proven, scalable, future-proof PDF technology from the source of PDF, Adobe.”

In addition to the new .NET interface to the Library, a major update to the Datalogics Java interface has also been released. This interface exposes the underlying API as a set of Java classes to developers who wish to integrate the PDF Library into their Java applications. Both interfaces will be packaged as part of Datalogics standard distribution of the Adobe PDF Library.

Contact Datalogics directly for more information on licensing, pricing and other technical information.

About the Adobe PDF Library

The Adobe PDF Library is a developer toolkit which allows third-party developers to support the PDF format within their own applications. Developers can build powerful Adobe PDF solutions in desktop environments as well as a wide range of server platforms, using the same core technology with which Adobe Systems, Inc. builds its Acrobat family of products. The toolkit provides access to a broad range of functionality; full compatibility with the latest PDF specification; consistent, reliable support on a broad range of platforms; as well as high-performance, scalable optimized PDF processing. Included as part of the Library distribution are the Datalogics® Enhancements™ (DLE), a set of modules which include various performance improvements and optimizations; enhanced functionality in the areas of graphics processing, watermarking and programmatic printing; and language interfaces for .NET and Java developers.

About Datalogics

Datalogics, Inc., an Adobe Portfolio Company and a leading provider of innovative document technologies, has dedicated over 40 years to delivering the highest quality software technologies and services which meet the most demanding customer needs. Datalogics is the source for Adobe PDF technologies. A solid background, partnerships with key firms, and a loyal customer base ensure that Datalogics is positioned to meet customer requirements now and into the future.
